Kolkata: IIM-Calcutta has upgraded its entire LAN cable connection to avoid network glitches during final placements that started on Thursday. Students were getting snapped out of online classes continuously, causing them to flag the issue with the management, resulting in a complete overhauling of the LAN connection in hostel rooms from where students are facing their placement interviews this time. The placements are being done virtually.

“The whole network has been comprehensively tested. The faulty equipment is being replaced. There is de-

icated manpower deployed on site covering all hostels,” said a communication from the director’s office. “Since LAN points in all hostel rooms are connected to high-speed stable internet, the students appearing for placements have been advised to use that support. The candidates are also being helped with extra hardware so that there is no time loss during an interview,” the communication said.

“Our responsibility is to support our students with the right resources and infrastructure. The technical snag was addressed in the most efficient way, resulting in a seamless first day of our placement season,” said institute director Anju Seth.
